

**ATAA<sup>TM</sup>** from Simply Testing Ltd is an advanced automation solution consisting of thousands of lines of code, written in the language of your chosen test tool.

Proven since 1992, **ATAA** offers more than just a framework. It is a complete test automation method which provides a highly maintainable automation structure and a sound platform for full data-driven automation. It contains a library of already tried and tested automation code and versions are available for all the popular automated testing tools such as WinRunner, QARun and Robot.

### Why build an automation framework when you can buy ATAA at a fraction of the cost?

Test Automation is software development. Automation tools must be programmed or 'scripted' in order to create all but the simplest automated tests. A reliable, effective automation framework may take you several years to build and even then you may never get there.

There is no need to re-invent the wheel for your automation project – **ATAA** can be used to hit the ground running. Instead of starting from scratch, **ATAA** can provide you with the foundations and structure for sophisticated test automation. It offers a proven automation method by which your scripters can build code. Automation code specific to your system under test is simply slotted into the framework. **ATAA** also boasts the most easily maintainable automation architecture, so that you can change your tests as your system changes.

Rather than having to get your staff up to speed with scripting tools, you may wish to use the **TestCoda** tool to generate automatically all of the system-specific automation code which plugs into **ATAA**.

### ATAA highlights

- Available for all major test tools
- A pre-built automation framework or architecture
- Thousands of lines of thoroughly tested, highly maintainable automation code
- Coding standards and roadmap for writing application specific code
- Test Analysts use the **ATAA** Test Data Manager in EXCEL to create test data
- Integrates with test management tools such as Test Director
- The Test Data Manager provides a way to create 'Re-Usable Test Objects'

### Benefits of ATAA

- Reduces the cost of test automation
- Reduces the time to get automation up and running
- Reduces the risk of failure of automation projects, as **ATAA** is a mature, tried and tested method

*Simply Testing's automated testing solution does what others only claim to do – **It works!***
